

THE STANDARD DUTY DCMJ

For standard duty applications — single-shift plants and warehouses receiving, storing, and shipping 1,000 drums or less per month — we suggest the DCMJ. Engineered to the highest standards in the industry, the DCMJ is recommended for all types of rimmed steel and plastic drums. Mechanical fibre drum guards allow for dependable handling of an occasional fibre drum as well. The DCMJ is a totally automatic and completely mechanical piece of equipment. No hydraulic or electrical connections are ever required, and the DCMJ fits on any lift truck. It carries a capacity of 1,000 pounds per drum and provides up to 10 years of reliable service with only minimal preventive maintenance. The DCMJ is protected by 1-year warranty, the longest in the industry, covering parts and workmanship. Individual warranty cards are available with each new Liftomatic attachment.

Exact side-by-side pick-up make stacking and loading an easy job. Slides right onto forks of any standard lift truck.

Jaws on DCMJ "Parrot-Beak" grab drums perfectly for pick-up and transport.

Fibre drum guards on all DCMJ models allow for safe and dependable handling of occasional fibre drums.

Different types and sizes of drums can be handled simultaneously!

DCM and DCMJ models work perfectly on "L-Ring" style plastic drums.

Extended carriage mount (EX-CM) units handle 1, 2 drums and can be used without forks in racking or palletizing situations. Available on DCM/DCMJ models.
