ASSEMBLY / OPERATING / MAINTENANCE INSTRUCTIONS
LIFTOMATIC MODEL BHDL & BHDL-1 & BHDL-SL

ASSEMBLY:

1) Align free arm (#1) and hanger arm (#2) as shown on parts diagram.
2) Insert pivot pin (#5) into aligned guide holes taking care to position washers (#4) as shown.
3) Secure pivot pin with 3/16” cotter pin provided.
4) Attach spring (#6) to eyelet of both arms as shown.

OPERATION:

CAUTION** When handling removable lid or “open top” drums over 750#, the tops of the drums should be securely in place before lifting so the drum’s sidewall will not collapse during lifting cycle.

1) Remove all wrapping and packing materials from the unit.
2) Visually inspect unit to see that no damage has occurred in shipping.
3) See that both arms of the unit move freely on center axis pin.
4) Attach BHDL to suitable overhead lifting device, using locking style safety hook.
5) To engage the drum, spread both arms of the BHDL over the center of the top of the drum.
6) Begin lifting unit slowly and as the arms of the BHDL close, ensure that the lifting pads engage easily and securely under the top chime of the drum and roughly on a centerline of the drum being engaged.
7) Once drum is engaged, move and lift slowly until drum is moved to desired position.
8) To disengage drum, simply reverse procedure. **NOTE**: TAKE EXTREME CARE WHEN LOWERING DRUM TO RESTING POSITION TO ENSURE THAT ALL EXTREMITIES ARE OUT OF HARM’S WAY WHEN DRUM IS SET ON FLOOR, PALLET, ETC..
9) For BHDL-SL units, see that safety latch is securely locked over catch pin prior to engaging the drum and disengaged from the catch pin prior to releasing the drum.

MAINTENANCE:

Periodically check unit for any abnormal wear of moving parts and to ensure that all fasteners and hardware are in proper position. See that moving axis pivot pin (#5) is lubricated monthly and moves freely.
