

Drum palletizing with Ergo-Matic Date: 1/3/1997

Liftomatic's model ERGO-1000-BC handles drums from the corner of any wood, plastic or steel pallet!

Getting drums on and off a pallet

TOUGH JOBS...

Your safety manager walked into your office at eight o'clock this morning grumbling that the night shift had an injury. Someone in the warehouse tried to manhandle a drum off a pallet, pinched a couple fingers and strained their back and was sent for medical attention. The production manager is screaming for materials, the warehouse is down a worker and there's paperwork that now has to be filed. She's looking to you for solutions and your thoughts of coffee and a quick check of your e-mail are out the window.

DEMAND TOUGH EQUIPMENT!

You make a few calls, consult a couple peers and they direct you to a new line of transportable devices that seem to be just right. The *Ergo-Matic*² family of transportable drum handlers provide an effective, safe and affordable solution for lifting, lowering and transporting any drum from ground level to heights of up to 34 inches! Available with a wide variety of features, finishes and options, the Ergo-Matic ensures that your people won't ever have to play handball with a drum again. Effortlessly, you order it, the warehouse folks love it, the safety manager is happy, and you're on to the next conquest...
